

## Eksempler på mit arbejde

Fra UddannelsesGuiden ([www.ug.dk](http://www.ug.dk)), Undervisningsministeriets vejledningsportal. Jeg var ansvarlig for den engelsksprogede del af portalen. Opgaverne bestod bl.a. i at researche, skrive og vedligeholde artiklerne om engelsksprogede uddannelser i Danmark.

The screenshot shows a web browser window titled "Philosophy - Windows Internet Explorer" with the URL <http://www.ug.dk/programmes/universityprogrammes/humanities/philosophy.aspx>. The page is the UddannelsesGuiden website, featuring a search bar, navigation tabs for "Uddannelser", "Job", "Programmes in English", and "Flere områder". The main content area is titled "Programme Philosophy" and includes a description of the program, a "Facts" section with details like "Name: Philosophy", "Type: University Programme", "Duration: 2 years", "European transfer credits: 120 ECTS", and "Language: English". It also lists "Addresses" for "Københavns Universitet" and "Aarhus Universitet" with a "Show on map" button. A sidebar on the right contains a "Search" box, an "About" section linking to "UddannelsesGuiden", and a section titled "The programme in Danish" linking to "Filosofi".

## Eksempler på mit arbejde

Et samarbejde med CIRIUS (Styrelsen for International Uddannelse) gjorde, at alle mine engelsksprogede artikler fra [www.ug.dk](http://www.ug.dk) automatisk blev overført til [www.studyindenmark.dk](http://www.studyindenmark.dk)

Programmes taught in English

- Parasitology
- Summer schools
- Full degree students
- Exchange students
- PhD students

### Parasitology

Parasites are tiny animals, plants or organisms that live off of sucking nutrients from others. They are often the cause of disease and illnesses. Parasitology is the study of parasites and their damaging effects.

---

Name: Parasitology  
Type: Master of Science (MSc)  
Length: 2 years  
European transfer credits: 120 ECTS  
Language: English

---

Parasites are organisms that live on or in other organisms (animals or plants) from which they get their nutrients.

Parasites are the cause of many different types of illnesses, just like bacteria. Most countries spend a lot of money to combat the serious illnesses caused by parasites, such as malaria.

In the Parasitology programme, you will get the scientific qualifications to analyse these illnesses and be involved in the development of new methods to limit them.

You will study the various forms of parasites and their associated illnesses in subjects such as:

- Parasite Systematics, which focuses on the different groups of parasites and how they are labelled systematically
- Parasitic Zoonoses, where you learn about the different illnesses, which parasites can transfer to animals and humans
- Parasitological Methods, where you learn about the various methods to combat illnesses

Through elective courses, you can specialise within a specific branch in parasitology. It can be tropical parasites, parasites in food and parasites in livestock production.

Teaching varies between lectures and classroom instruction. In addition, there is often project work together with other students. Students are encouraged to participate in class discussions.

Parasitology can be studied as a:

- 2-year MSc programme (120 ECTS)

You also have the possibility to take single courses or subjects within the programme.

If you choose to complete the master's degree programme, you will graduate with the academic title of Master of Science (MSc).
